

## PATIENT SAFETY AT POINT OF SALE

# Concurrent Drug Utilization Review (CDUR)

### Enhancing Patient Safety

Point-of-sale alerts to pharmacists help identify adverse drug events, medical conflicts, inappropriate drug use and drug-drug interactions; as much as 70% of prescribing errors are captured by nurses and pharmacists

### Serving Vulnerable Populations

Seniors, pregnant women and children are particularly at risk for hospitalization and emergency room visits as a result of prescribing errors; Express Scripts offers alerts specific to certain populations to reduce risk and improve outcomes

### Data-Driven for Better Outcomes

Express Scripts' robust Concurrent Drug Utilization Review (CDUR) program leverages the latest CDC and FDA guidelines as well as medical literature to support better prescribing and dispensing habits

We empower our clients with robust reporting to help highlight trends in patient activity and savings

Where possible, we leverage medical data to identify potential drug-disease interactions\*

### Healthier Patients, Greater Client Savings

CDUR is a core service critical to preventing adverse drug events

It also reduces wasteful medical spend by preventing inappropriate drug prescribing and consumption, saving our clients more than \$6 billion in 2024.

\*Clients leveraging medical data must have RationalMed
