

Managing Home Infusion Therapy

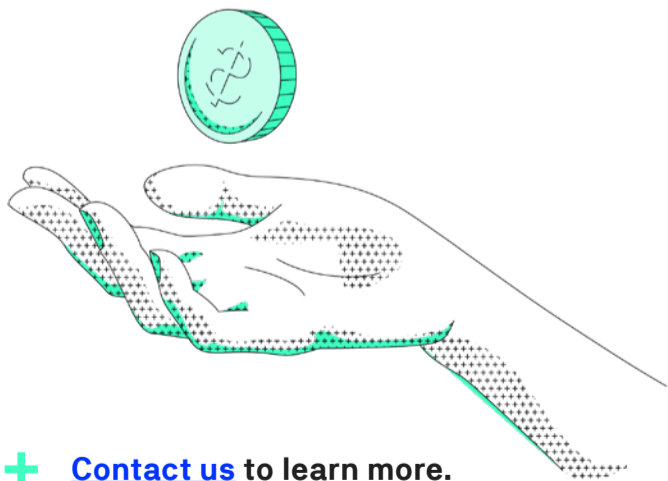

The critical challenge

Growing consumer demand and increasingly stringent regulations have put the onus on plan sponsors to prioritize a more comprehensive approach to managing home infusions.

A tailor-made solution

By combining utilization management, claims management, network management and a high level of clinical oversight, **Evernorth Home Infusion Therapy Complete** helps plans drive savings, eliminate fragmentation and ensure compliance across all facets of the home infusion continuum.

How it works

01 A patient was prescribed one infusion per month of Gammagard[®] at home for six months to treat a primary immune deficiency.

02 The provider incorrectly entered an invalid code for the therapy, in addition to grossly overestimating the amount of nursing services and supplies by **79 units**.

03 Most plans only review one code at a time, potentially without correlating it to the overall scope of drugs and services being prescribed. **Evernorth Home Infusion Therapy Complete**, however, delivers holistic visibility of all codes, dosing and support services for our clinical experts to evaluate, enabling us to immediately flag and fix both mistakes.

04 Thanks to the clinical rigor applied to our systematic review process, each error was rectified to ensure maximum cost savings and an optimal clinical outcome. This equated to **\$5,467.69** in savings for a single patient claim and the patient avoiding a delay in starting therapy.*
