

What your patients need to know before they go

When you know your patient's prescription details, you're empowered to make better decisions for their therapy. Real-Time Prescription Benefit (RTPB) provides a view of patient coverage details directly within your Electronic Health Record (EHR). You'll know out-of-pocket costs, therapeutic options and more - enabling you and your staff to make optimized prescribing decisions that improve adherence, increase days on therapy and lower costs.

75%

of patients have been **surprised** by costs at the pharmacy.¹

30%

of adult patients have **cut pills in half**, skipped a dose or taken an over-the-counter drug because of cost.²

13M

Patients **skip doses** every year because of cost.³

When you know, they know

Real-Time Prescription Benefit empowers you and your office staff with the following information within your EHR:

- + Patients' out-of-pocket costs
- + Therapeutic options
- + Coverage alerts
- + Pharmacy choices

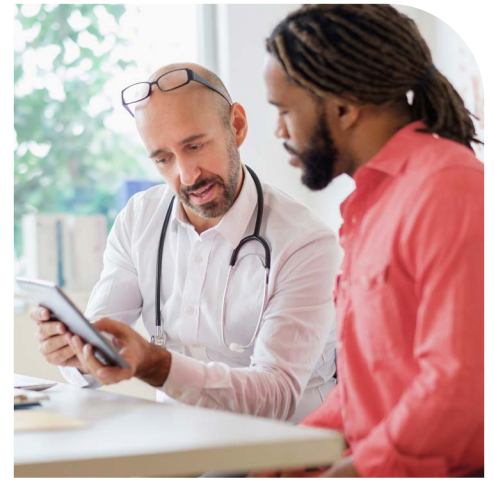

That information isn't just helpful, it's valuable

\$250M

in member savings⁴

Know the cost before they go

Instantly access out-of-pocket costs, therapeutic options and pharmacy choices to help decide which therapy is right for your patient. You and your patients save time and potentially save money when the optimal options are filled the first time. You also save your patients from the hassle of finding out their prescription isn't covered when they're standing at the pharmacy counter.

CASE STUDY

Know what it looks like in action

See how utilizing RTPB saves both the physician and member time by identifying the right pharmacy, right at the point of care.

A gynecologic oncologist examined their patient

When considering drug options for therapy, the provider utilized RTPB

Directly in the exam room, the doctor prescribed the medication to a retail pharmacy chosen by their patient

Due to the medication being used to treat a recent cancer diagnosis, the patient's chosen pharmacy was not appropriate for the new prescription

RTPB immediately alerted the provider that the drug would need to be filled at a specialty pharmacy

This insight circumvented surprises for the patient at the pharmacy and improved speed to therapy

"RTPB lets patients know what to expect. It removes the guesswork for me and 'sticker shock' for my patients at the pharmacy."

- Family Practice Physician since 1991

Express Scripts can help you start using RTPB directly within your EHR. Just [follow this link](#) and scroll down to Real-time Data to get started.
