Real-Time Prescription Benefit Using Epic

Easy to access. Easy to use.

Now you're empowered with innovation directly within your Electronic Medical Record (EMR) at the point of care.

⌁ Real-time data   ☑ Improved clinical outcomes   👤 Reduced administrative burden

---

✓ **STEP 1**
Electronic Medical Record

An EMR is a prerequisite for enabling
Real-Time Prescription Benefit (RTPB)

Ensure RTPB is a capability offered
within your Epic EMR workflow

✓ **STEP 2**
EMR Enablement and Activation

Evernorth requires the use of a third-party data vendor in order to process RTPB transactions.

Express Scripts works with these vendors: Arrive Health | CenterX | SureScripts

Epic prerequisites to establish prior to getting started with RTPB

A 2018-present version of Epic

A signed data agreement with a data vendor

System settings enabled to select defaults for system's behavior

Turn on RTPB (Epic presents it as 'Pricing Estimates') within system settings

Ensure RTPB defaults are set

Recommended settings: Max # of alternatives presented-5
Timeout for medication estimates at signing: 3 seconds

Note: Real-Time Prescription Benefit is also referred to as the following as determined by the EMR supporting it:
Price Transparency | Real-Time Benefit Check | Price Estimates | Formulary & Benefit | Real-Time Benefit Tool

---

Follow these steps to start using Real-Time Prescription Benefit in your existing workflow today.

GETTING STARTED WITH

Real-Time Prescription Benefit Using Another EMR

Easy to access. Easy to use.

Now you're empowered with innovation directly within your Electronic Medical Record (EMR) at the point of care.

- Real-time data
- Improved clinical outcomes
- Reduced administrative burden

STEP 1
Electronic Medical Record

An EMR is a prerequisite for enabling Real-Time Prescription Benefit (RTPB)

Ensure RTPB is a capability offered within your EMR workflow

STEP 2
EMR Enablement and Activation

Evernorth requires the use of a third-party data vendor in order to process RTPB transactions.

Express Scripts works with these vendors: Arrive Health | SureScripts

Ensure software version features RTPB

Upgrade to the software version that features RTPB

Confirm the name of RTPB within your respective EMR (See 'Step 1')[1]

1. For example – Cerner references RTPB as 'Formulary & Benefit'

Note: Real-Time Prescription Benefit is also referred to as the following as determined by the EMR supporting it: Price Transparency | Real-Time Benefit Check | Price Estimates | Formulary & Benefit | Real-Time Benefit Tool

Follow these steps to start using Real-Time Prescription Benefit in your existing workflow today.
